Optional Real-W

Why is it necessary and important to adopt new or different technologies when dealing in data science? Select all that apply.

- ☐ Conventional tools and techniques do not scale well on very large data sets.
- ☐ New technologies are always better than old ones.
- ☐ It may be simpler and faster to do the analysis you are interested in on a different technology.
- ☐ Using a new or different technology can greatly reduce the cost (time/money) of understanding a large data set.
